

OUR
STEPS
TOWARD
A *greener*
FUTURE.

Exhibit Systems has had a 'green' way of thinking since inception and with an overall philosophy of caring for the Environment. It is the little efforts we all make that add to the big picture.

LESS WASTAGE

REDUCE

GAS EMISSION

- By fully loading our tracks and using local outsources.

POWER USAGE

- By using Energy Efficient LED lighting and screens.
- By choosing natural light and air system where possible.

REUSE

- All the fascia panels substrates.
- All the sign panels that can be cut down to smaller panels to be reprinted.

REPURPOSE

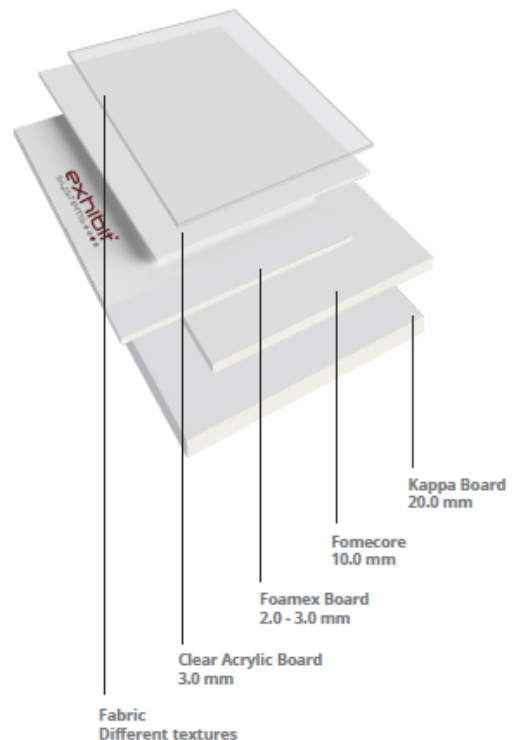

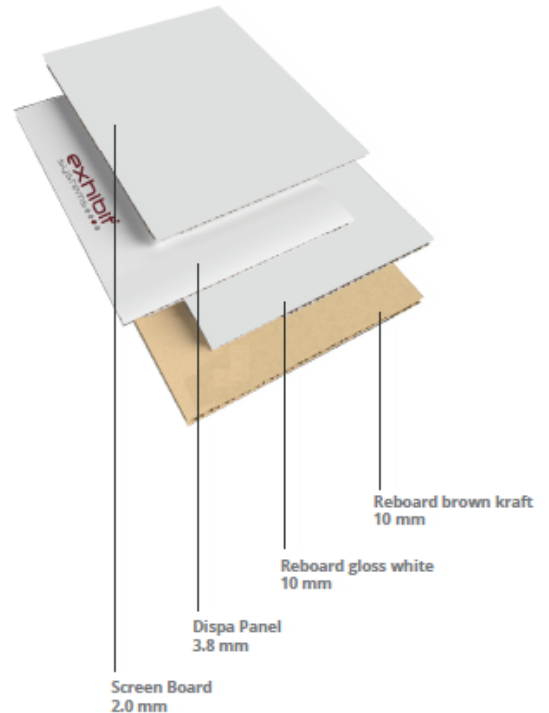

- By using all the wooden leftovers for new projects.
- By using any small piece of panels we can reprint.

RECYCLE

- By using fully recyclable materials, such as all our aluminium frames and our screenboard FSC signage and 16mm reboard bench top.

MORE ACTION !

OUR CARDBOARD SELECTION

OUR RECYCLABLE SELECTION

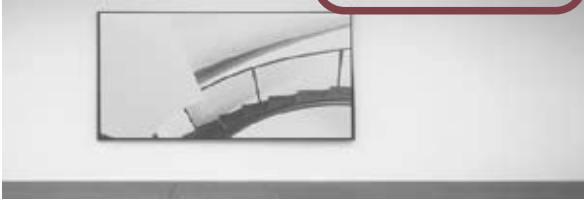

We support the Australian government's voluntary initiative to create a cleaner, healthier country through buying GreenPower to run our business.

WE LIVE IN A MATERIAL WORLD.

OUR SUSTAINABLE COMPONENTS

FRAMES

Our frames are locally sourced, and all made of aluminium. So that they can be reused and fully recycled.

TIMBER

Local, recycled and certified by EPA Environmental Preservation. And it comes from renewable plantation.

PRINTING

We offer sustainable printing components options, recycled and recyclable. And we use Eco-Solvent inks only.

SURFACES

We have sustainable surface options for printing, production and furniture - such as our 16mm reboard bench top.

Some of the most effective air purifying plants include **English Ivy**, **Spider plants**, **Peace Lilies**, and **Snake plants**. They improve indoor air quality, helping to reduce aircon usage. We have them all in our offices, and we love them!

DID YOU KNOW?

OUR HEARTS BELONG TO THE PLANET.

We proudly choose natural plants over the plastic ones in all our events, and we fully encourage the organisers to join our cause. Less plastic, more oxygen, better result.

OUR GREEN CHOICES BEHIND A PANEL'S LIFE

FROM THE DESIGN DEPARTMENT TO THE WAREHOUSE AND DISTRIBUTION, THESE ARE ALL THE LITTLE ACTIONS WE TAKE TO MINIMIZE OUR FOOTPRINTS.

DESIGN

- Promote the use of energy efficiency in all our departments.
- Promoting system designed stands over resource intensive custom manufacture
- Promote the use of reusable design infrastructure and system components. (eg re-usable aluminium framed system, and cut and trim larger panels to smaller panels.
- Promote the use of recycled materials
- Eco-solvent digital print inks
- Re-use all fascia panel substrates over and over again by peeling off the lettering only

WAREHOUSE

- Gas powered forklifts used rather than petrol
- Prolong the life of panels with careful maintenance for a longer lifespan
- Use renewable plantation pine-box to pack the panels
- Minimise carbon emissions by sound scheduling procedures and ensuring trucks are fully and efficiently packed to reduce the number of trips to site.

DISTRIBUTION

- Encourage clients to store and re-use all or part of custom stands rather than a re-design and build.
- Prolong the life of panels with careful handling and maintenance.
